

# Get a HotStart

Keep it simple. Take advantage of HotStartPRO's fully automatic firing. Like the popcorn button on your microwave, it'll make all the decisions. Unless, of course, you want to make a few of your own. Then go ahead, soak a little longer, fire a little hotter—whatever. It's completely up to you.

## And Go PRO

When a project calls for meticulous attention to the *finest* points of firing—no sweat. Just select PRO and enter your own programs, up to 8 segments long. Store 5 of them in memory for as long as you like; adjust them whenever you wish. With a HotStartPRO, all the intricacy of kilncraft is under your control.

### Now with **FREE** Glass!

Now through 12/31/07, every HotStartPRO will ship with:

- A colorful selection of Spectrum System 96 glass
- A piece of S96 dichroic glass from CBS
- A selection of Uroboros System 96 specialty glass

### HotStartPRO™

Operates on standard household current. Shelf size—13", depth—6.5".
